PROFESSIONAL SUMMARY

Artificial Intelligence & Data Science engineering student with a strong foundation in Python, SQL, AI/ML, data analysis, and problem-solving. Experienced through internships in data analysis, Java programming, and AI/ML training, with academic projects focused on crop disease prediction and radar-based data analysis. Seeking opportunities to apply technical skills to real-world AI, machine learning, and data-driven problems.

EDUCATION

B.Tech. in AI & Data Science — **Current CGPA: 8.38/10**
V.S.B. Engineering College • 2023–2028 — Currently 2nd Year

Grade XII — **75%**
Presentation Convent Matriculation Higher Secondary — July 2024

Grade X — **70%**
Orison Academy — July 2021

TECHNICAL SKILLS

Programming: Python, Java, C, C++, SQL
AI / Data: Artificial Intelligence, Machine Learning, Data Science, Data Analysis
Tools / Platforms: Power BI, Infosys Springboard
Core Strengths: Problem-solving, Communication, Teamwork, Leadership, Adaptive Learning

INTERNSHIP EXPERIENCE

Data Analysis Intern — 05/07/2026 – 05/08/2026
Cognifyz IT Solutions Pvt. Ltd.
- Participated in professional data-analysis work and completed assigned analytical tasks with attention to detail.
- Demonstrated effective coordination, communication, and willingness to learn in a professional environment.

Virtual Intern – Java Programming — 01/01/2026 – 30/01/2026
CodeAlpha
- Completed a virtual internship focused on Java programming and strengthened programming-based problem-solving skills.
- Applied analytical thinking and consistency while completing assigned programming tasks.

AI & Machine Learning Intern — 16/06/2025 – 25/07/2025
Profenaa Technologies
- Completed a 40-day intensive AI/ML internship program with 100% attendance.
- Developed practical understanding of AI/ML concepts and contributed to team projects.
- Applied problem-solving and analytical thinking while working collaboratively on technical tasks.

PROJECTS

AI-Driven Crop Disease Prediction
- Applied artificial intelligence and machine learning techniques to detect and predict crop diseases using environmental datasets.

Radar-Based Air Defence Data Analysis
- Processed and analyzed radar-related datasets to identify patterns and generate insights from complex data.

CERTIFICATIONS & TRAINING

- Big Data Computing — 8-week NPTEL / IIT Kanpur course (Score: 61%, Aug–Oct 2025)
- Free Data Analyst Course — Simplilearn (July 7, 2025)
- Infosys Springboard — Artificial Intelligence, Power BI
- Training — Data Structures and Algorithms

INTERESTS

Technology, continuous learning, listening to music
